Environmental Policy 2026

- (1) We promote manufacturing through resource and energy conservation, reduction of the environmental footprint, and decarbonization through the development and production of environmentally friendly products (high stress, lightweight) and the design of their facilities.
- (2) We will continue to improve our environmental management system to improve our environmental performance and will achieve carbon neutrality by 2039 (halving the 2013 level by 2030).
- (3) We will strive to prevent pollution and contribute to a decarbonized society, recycling society, and a society in harmony with nature.
- (4) We will comply with national and local environmental regulations and other requirements which we have agreed.
- (5) We will promote swift and effective environmental conservation by setting and regularly reviewing our environmental objectives, adopting new technologies, and continuously enhancing our environmental knowledge.
